Marking Scheme

Agricultural Science

Ordinary Level

Note to teachers and students on the use of published marking schemes

Marking schemes published by the State Examinations Commission are not intended to be standalone documents. They are an essential resource for examiners who receive training in the correct interpretation and application of the scheme. This training involves, among other things, marking samples of student work and discussing the marks awarded, so as to clarify the correct application of the scheme. The work of examiners is subsequently monitored by Advising Examiners to ensure consistent and accurate application of the marking scheme. This process is overseen by the Chief Examiner, usually assisted by a Chief Advising Examiner. The Chief Examiner is the final authority regarding whether or not the marking scheme has been correctly applied to any piece of candidate work.

Marking schemes are working documents. While a draft marking scheme is prepared in advance of the examination, the scheme is not finalised until examiners have applied it to candidates' work and the feedback from all examiners has been collated and considered in light of the full range of responses of candidates, the overall level of difficulty of the examination and the need to maintain consistency in standards from year to year. This published document contains the finalised scheme, as it was applied to all candidates' work.

In the case of marking schemes that include model solutions or answers, it should be noted that these are not intended to be exhaustive. Variations and alternatives may also be acceptable. Examiners must consider all answers on their merits, and will have consulted with their Advising Examiners when in doubt.

Future Marking Schemes

Assumptions about future marking schemes on the basis of past schemes should be avoided. While the underlying assessment principles remain the same, the details of the marking of a particular type of question may change in the context of the contribution of that question to the overall examination in a given year. The Chief Examiner in any given year has the responsibility to determine how best to ensure the fair and accurate assessment of candidates' work and to ensure consistency in the standard of the assessment from year to year. Accordingly, aspects of the structure, detail and application of the marking scheme for a particular examination are subject to change from one year to the next without notice.

MARKING SCHEME AGRICULTURAL SCIENCE ORDINARY LEVEL 2020

SECTION ONE

Six questions to be answered

Each question carries 20 marks

Q 1																														
(a)	<p><i>Soil texture:</i> The % sand, silt and clay (in a soil)</p>	4																												
(b)	<p><i>Finding soil texture:</i> <i>Sieve method:</i> Dry soil/ crush soil/ weigh soil sample/ arrange sieves so that sieve with largest mesh size is on top/ place soil in top sieve and cover/ shake sieves/ weigh amount of soil in each sieve/ refer to soil textural triangle Any four or <i>Feel method:</i> Rub or feel (dry) soil (between thumb and finger)/ note grittiness or smoothness/ repeat with wet soil/ roll wet soil into a ball or a thread or bend into rings if possible/ compare (observations) to flow chart Any four or <i>Sedimentation method:</i> Place soil sample in beaker of water and stir/ add soil- water mixture to a graduated cylinder and add more water/ shake the soil- water mixture vigorously/ allow soil to settle/ measure the depth of each soil component/ refer to soil textural triangle Any four</p>	4(3)																												
(c)	<p><i>Reason for any one step above:</i> <i>Sieve method:</i></p> <table border="1"> <thead> <tr> <th>Step</th><th>Reason</th></tr> </thead> <tbody> <tr> <td>Dry soil</td><td>Allows soil to pass through sieves</td></tr> <tr> <td>Crush soil</td><td>Breaks up lumps of soil</td></tr> <tr> <td>Weigh soil</td><td>To find the mass of soil or to allow calculation of % of each soil component</td></tr> <tr> <td>Sieves in correct order</td><td>To facilitate separation of soil particles</td></tr> <tr> <td>Shake sieves</td><td>To move soil particles through sieves</td></tr> <tr> <td>Weigh soil in each sieve</td><td>To calculate mass of each soil component</td></tr> <tr> <td>Refer to soil textural triangle</td><td>To determine texture of soil</td></tr> </tbody> </table> <p>or</p> <p><i>Feel method:</i></p> <table border="1"> <thead> <tr> <th>Step</th><th>Reason</th></tr> </thead> <tbody> <tr> <td>Rub soil between fingers</td><td>To determine feel of soil</td></tr> <tr> <td>Note grittiness of soil</td><td>To assess sand content in soil</td></tr> <tr> <td>Wet soil</td><td>To allow soil to be rolled into a ball or thread</td></tr> <tr> <td>Roll soil into a ball or thread</td><td>To assess clay and/or silt content in soil</td></tr> <tr> <td>Compare to flow chart</td><td>To determine texture of soil</td></tr> </tbody> </table>	Step	Reason	Dry soil	Allows soil to pass through sieves	Crush soil	Breaks up lumps of soil	Weigh soil	To find the mass of soil or to allow calculation of % of each soil component	Sieves in correct order	To facilitate separation of soil particles	Shake sieves	To move soil particles through sieves	Weigh soil in each sieve	To calculate mass of each soil component	Refer to soil textural triangle	To determine texture of soil	Step	Reason	Rub soil between fingers	To determine feel of soil	Note grittiness of soil	To assess sand content in soil	Wet soil	To allow soil to be rolled into a ball or thread	Roll soil into a ball or thread	To assess clay and/or silt content in soil	Compare to flow chart	To determine texture of soil	4
Step	Reason																													
Dry soil	Allows soil to pass through sieves																													
Crush soil	Breaks up lumps of soil																													
Weigh soil	To find the mass of soil or to allow calculation of % of each soil component																													
Sieves in correct order	To facilitate separation of soil particles																													
Shake sieves	To move soil particles through sieves																													
Weigh soil in each sieve	To calculate mass of each soil component																													
Refer to soil textural triangle	To determine texture of soil																													
Step	Reason																													
Rub soil between fingers	To determine feel of soil																													
Note grittiness of soil	To assess sand content in soil																													
Wet soil	To allow soil to be rolled into a ball or thread																													
Roll soil into a ball or thread	To assess clay and/or silt content in soil																													
Compare to flow chart	To determine texture of soil																													

	<p style="text-align: center;">or</p> <p>Sedimentation method:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center; padding: 2px;">Step</th><th style="text-align: center; padding: 2px;">Reason</th></tr> </thead> <tbody> <tr> <td style="padding: 2px;">Stir soil and water in beaker</td><td style="padding: 2px;">To break up lumps of soil</td></tr> <tr> <td style="padding: 2px;">Soil and water in a graduated cylinder</td><td style="padding: 2px;">To allow soil- water mixture to be shaken or to allow layers of each particle type to be measured</td></tr> <tr> <td style="padding: 2px;">Shake soil-water mixture vigorously</td><td style="padding: 2px;">To separate soil into its different components</td></tr> <tr> <td style="padding: 2px;">Allow soil to settle</td><td style="padding: 2px;">To allow sand, silt and clay particles to settle into different layers.</td></tr> <tr> <td style="padding: 2px;">Measure depth of each layer</td><td style="padding: 2px;">To calculate % sand, silt and clay</td></tr> <tr> <td style="padding: 2px;">Refer to soil textural triangle</td><td style="padding: 2px;">To determine texture of soil</td></tr> </tbody> </table>	Step	Reason	Stir soil and water in beaker	To break up lumps of soil	Soil and water in a graduated cylinder	To allow soil- water mixture to be shaken or to allow layers of each particle type to be measured	Shake soil-water mixture vigorously	To separate soil into its different components	Allow soil to settle	To allow sand, silt and clay particles to settle into different layers.	Measure depth of each layer	To calculate % sand, silt and clay	Refer to soil textural triangle	To determine texture of soil	
Step	Reason															
Stir soil and water in beaker	To break up lumps of soil															
Soil and water in a graduated cylinder	To allow soil- water mixture to be shaken or to allow layers of each particle type to be measured															
Shake soil-water mixture vigorously	To separate soil into its different components															
Allow soil to settle	To allow sand, silt and clay particles to settle into different layers.															
Measure depth of each layer	To calculate % sand, silt and clay															
Refer to soil textural triangle	To determine texture of soil															

Q 2

(a)	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left; padding: 2px;">Animal</th><th style="text-align: left; padding: 2px;">Length of gestation (pregnancy)</th><th style="text-align: left; padding: 2px;">Birth weight of offspring (kg)</th></tr> </thead> <tbody> <tr> <td style="padding: 2px;">Pig</td><td style="padding: 2px;">3 months, 3 weeks, 3 days (or 110 – 120 days)</td><td style="padding: 2px;">1 – 1.5 kg</td></tr> <tr> <td style="padding: 2px;">Sheep</td><td style="padding: 2px;">5 months (or 145 – 155 days)</td><td style="padding: 2px;">3 – 5 kg</td></tr> <tr> <td style="padding: 2px;">Cow</td><td style="padding: 2px;">9.5 months (or 280 – 290 days)</td><td style="padding: 2px;">35 – 45 kg</td></tr> </tbody> </table>	Animal	Length of gestation (pregnancy)	Birth weight of offspring (kg)	Pig	3 months, 3 weeks, 3 days (or 110 – 120 days)	1 – 1.5 kg	Sheep	5 months (or 145 – 155 days)	3 – 5 kg	Cow	9.5 months (or 280 – 290 days)	35 – 45 kg			
Animal	Length of gestation (pregnancy)	Birth weight of offspring (kg)														
Pig	3 months, 3 weeks, 3 days (or 110 – 120 days)	1 – 1.5 kg														
Sheep	5 months (or 145 – 155 days)	3 – 5 kg														
Cow	9.5 months (or 280 – 290 days)	35 – 45 kg														
(b)	<p>(i) What colostrum is: First milk a young mammal (or named mammal) gets from its mother</p> <p>(ii) Why colostrum is important: Rich in nutrients (or named nutrient)/ highly digestible/ rich in antibodies/ provides immunity/ warming effect/ laxative effect</p>		Any two	4 + 8(2)												

Q 3

(a)	Stomata are pores found on the leaves of plants	T	10(2)
(b)	Pigs have a ruminant stomach	F	
(c)	Malting barley is used in the production of alcohol	T	
(d)	Brucellosis in cattle is caused by bacteria	T	
(e)	Clover plants can fix nitrogen	T	
(f)	Golden Wonder potatoes are a first early potato variety	F	
(g)	Sandstone is an igneous rock type	F	
(h)	L.W.G. stands for lower weight gain	F	
(i)	The right ventricle of the heart pumps blood around the body	F	
(j)	The crane fly larva is called a leatherjacket	T	

Q 4				5(2 + 2)
	Item/Machine	Name	Function	5(2 + 2)
	B	Slurry agitator	To break hard crust or to mix the solids and liquids or to allow gases to escape or easier to spread	
	C	Bale grabber	To transport bales (of hay) or to stack bales	
	D	(Reversible) plough	To turn the soil or to bury stubble or to bury weeds	
	E	Round feeder	Feeding fodder to livestock	
	F	Muck (or dung) spreader	To spread farmyard manure	

Q 5			
(a)	<i>Sources of pollution:</i> Slurry/ silage effluent/ plastic/ pesticides/ herbicides/ waste oil/ lead paint/ smoke (e.g. gorse fires)/ parlour washings/ fertiliser run-off	Any two	4(4) + 2(2)

(b)	<i>Harmful effects of given pollution sources:</i>	<table border="1"><thead><tr><th>Source</th><th>Harmful effect</th><th>Source</th><th>Harmful effect</th></tr></thead><tbody><tr><td>Slurry</td><td>Water pollution</td><td>Waste oil</td><td>Water pollution</td></tr><tr><td>Silage effluent</td><td>Water pollution</td><td>Lead paint</td><td>Toxic to livestock</td></tr><tr><td>Plastic</td><td>Choking of livestock</td><td>Smoke</td><td>Air pollution</td></tr><tr><td>Pesticides</td><td>Can kill non-target species</td><td>Parlour washings</td><td>Water pollution</td></tr><tr><td>Herbicides</td><td>Can kill non-target species</td><td>Fertiliser run-off</td><td>Water pollution</td></tr></tbody></table> Any two	Source	Harmful effect	Source	Harmful effect	Slurry	Water pollution	Waste oil	Water pollution	Silage effluent	Water pollution	Lead paint	Toxic to livestock	Plastic	Choking of livestock	Smoke	Air pollution	Pesticides	Can kill non-target species	Parlour washings	Water pollution	Herbicides	Can kill non-target species	Fertiliser run-off	Water pollution	4(4) + 2(2)
Source	Harmful effect	Source	Harmful effect																								
Slurry	Water pollution	Waste oil	Water pollution																								
Silage effluent	Water pollution	Lead paint	Toxic to livestock																								
Plastic	Choking of livestock	Smoke	Air pollution																								
Pesticides	Can kill non-target species	Parlour washings	Water pollution																								
Herbicides	Can kill non-target species	Fertiliser run-off	Water pollution																								
(c)	<i>Farming practices to reduce CO₂ in atmosphere:</i> Plant trees (or hedgerows)/ more efficient farm machinery or proper maintenance of farm machinery/ solar panels/ minimum till/ wind generated electricity/ reduction in number of livestock on farm/ organic farming	Any two																									

Q 6

(a)	<p><i>Parts of stomach:</i></p> <p>B: Rumen C: Reticulum D: Omasum E: Abomasum</p>	<p>2(4) + 6(2)</p>									
(b)	<p><i>Which part has which function:</i></p> <table border="1"> <thead> <tr> <th>Function</th><th>Part (letter only in each case)</th></tr> </thead> <tbody> <tr> <td><i>Squeezes, and absorbs water</i></td><td>D</td></tr> <tr> <td><i>Pushes food back up into the mouth</i></td><td>C</td></tr> <tr> <td><i>Completes digestion of food</i></td><td>E</td></tr> <tr> <td><i>Contains bacteria and protozoans which digest cellulose</i></td><td>B</td></tr> </tbody> </table>		Function	Part (letter only in each case)	<i>Squeezes, and absorbs water</i>	D	<i>Pushes food back up into the mouth</i>	C	<i>Completes digestion of food</i>	E	<i>Contains bacteria and protozoans which digest cellulose</i>
Function	Part (letter only in each case)										
<i>Squeezes, and absorbs water</i>	D										
<i>Pushes food back up into the mouth</i>	C										
<i>Completes digestion of food</i>	E										
<i>Contains bacteria and protozoans which digest cellulose</i>	B										

Q 7

(a)	<p><i>One reason for each farm practice:</i></p> <p><i>Vaccination of farm animals:</i> Prevents disease (or named disease) or stimulates antibody production or provides immunity</p>	<p>5(4)</p>
(b)	<p><i>Using footbaths:</i> To prevent foot rot or to prevent foot infection or to prevent lameness</p>	
(c)	<p><i>Growing certified seed potatoes:</i> Free from diseases (or named disease) or free from viruses or true-to-type or higher yields or seed graded to uniform tuber size</p>	
(d)	<p><i>Subsoiling:</i> To break up pans or improves drainage or loosens compacted soils or improves root penetration or improves aeration</p>	
(e)	<p><i>Maintaining hedgerows:</i> Habitat for wildlife or natural boundaries or natural amenity or improved crop growth (on sheltered side) or reduce soil erosion or to keep animals warm or to protect crops or to increase soil temperature or sound barrier or replenish oxygen or reduce carbon dioxide or encourages biodiversity or for biosecurity</p>	

Q 8																										
(a)	<p>(i) <i>Paddock grazing system:</i> <i>Drawing to show:</i> Means of access to paddock (e.g. roadway or pathway) and at least 10 paddocks <i>Labels:</i> (Permanent) roadway/ water(supply)/ fencing/paddocks showing re-growth or recovery/ indication of direction of movement of livestock/ number of paddocks labelled (e.g. 20-25 paddocks)</p> <p style="text-align: right;"><i>Any two</i></p> <p>(ii) <i>Advantages:</i> Fresh grass each day/ controlled grazing/ 21-day rotation/ time for grass to recover/ reduced incidence of parasitic worms/ paddocks can be fertilised when animals move/ more efficient use of grass (or less wastage or less trampling of grass)/ livestock spend less time walking/ palatable grass always available/ grass more digestible/ maximum production from animals (or higher milk yields or increased weight gain)/ some paddocks can be closed off for silage (or hay)/ low labour input (or easy to manage)</p> <p style="text-align: right;"><i>Any two</i></p> <p><i>Disadvantages :</i> Expensive to set up/paddock must have permanent water supply/fencing for each paddock/can be difficult to cut silage (or hay) if paddocks are small/poaching damage is possible (in certain weather conditions)</p> <p style="text-align: right;"><i>Any two</i></p>	5, 3, 0 2(2) 2(3) 2(3)																								
(b)	<p>(i) <i>Steps in making good quality hay and a reason for any one step:</i></p> <table border="1"> <thead> <tr> <th>Steps taken</th><th>Reason</th></tr> </thead> <tbody> <tr> <td>Close field in time (or for 10 weeks)</td><td>Adequate time for grass to grow or higher yield of hay</td></tr> <tr> <td>Adequate fertiliser</td><td>Promotes good growth or higher yield of hay</td></tr> <tr> <td>Use good quality grass varieties (or named grass variety e.g. PRG)</td><td>Hay of better quality or more digestible or easier to dry</td></tr> <tr> <td>Control weeds</td><td>Hay of better quality or prevents poisoning (of livestock)</td></tr> <tr> <td>Cut or mow grass in dry weather</td><td>Easier drying or lowers risk of weather damage</td></tr> <tr> <td>Allow grass to wilt or dry</td><td>Lowers moisture content</td></tr> <tr> <td>Ted (or turn or shake) grass</td><td>Faster drying or lets air through grass</td></tr> <tr> <td>Rake (or gather) into rows</td><td>Easier to bale</td></tr> <tr> <td>Allow hay to dry before baling</td><td>Prevents rotting of hay</td></tr> <tr> <td>Bale hay</td><td>Easier to handle (or transport) or easier to store</td></tr> <tr> <td>Store hay in (leak-proof) shed or undercover</td><td>Keeps hay dry or prevents rotting</td></tr> </tbody> </table>	Steps taken	Reason	Close field in time (or for 10 weeks)	Adequate time for grass to grow or higher yield of hay	Adequate fertiliser	Promotes good growth or higher yield of hay	Use good quality grass varieties (or named grass variety e.g. PRG)	Hay of better quality or more digestible or easier to dry	Control weeds	Hay of better quality or prevents poisoning (of livestock)	Cut or mow grass in dry weather	Easier drying or lowers risk of weather damage	Allow grass to wilt or dry	Lowers moisture content	Ted (or turn or shake) grass	Faster drying or lets air through grass	Rake (or gather) into rows	Easier to bale	Allow hay to dry before baling	Prevents rotting of hay	Bale hay	Easier to handle (or transport) or easier to store	Store hay in (leak-proof) shed or undercover	Keeps hay dry or prevents rotting	4(3) steps + 3 for one reason
Steps taken	Reason																									
Close field in time (or for 10 weeks)	Adequate time for grass to grow or higher yield of hay																									
Adequate fertiliser	Promotes good growth or higher yield of hay																									
Use good quality grass varieties (or named grass variety e.g. PRG)	Hay of better quality or more digestible or easier to dry																									
Control weeds	Hay of better quality or prevents poisoning (of livestock)																									
Cut or mow grass in dry weather	Easier drying or lowers risk of weather damage																									
Allow grass to wilt or dry	Lowers moisture content																									
Ted (or turn or shake) grass	Faster drying or lets air through grass																									
Rake (or gather) into rows	Easier to bale																									
Allow hay to dry before baling	Prevents rotting of hay																									
Bale hay	Easier to handle (or transport) or easier to store																									
Store hay in (leak-proof) shed or undercover	Keeps hay dry or prevents rotting																									

	<p>(ii) A reason for each listed step in silage making:</p> <table border="1"> <thead> <tr> <th>Listed steps</th> <th>Reason</th> </tr> </thead> <tbody> <tr> <td>1. Cutting the grass on a sunny day</td> <td>Higher concentration of sugars (or carbohydrates)</td> </tr> <tr> <td>2. Allowing the cut grass to wilt</td> <td>Increases dry matter content or less effluent</td> </tr> <tr> <td>3. Rolling or baling the cut grass</td> <td>Creates anaerobic conditions (or eliminates oxygen)</td> </tr> <tr> <td>4. Covering the grass in plastic</td> <td>Creates anaerobic conditions or prevents rotting</td> </tr> </tbody> </table>	Listed steps	Reason	1. Cutting the grass on a sunny day	Higher concentration of sugars (or carbohydrates)	2. Allowing the cut grass to wilt	Increases dry matter content or less effluent	3. Rolling or baling the cut grass	Creates anaerobic conditions (or eliminates oxygen)	4. Covering the grass in plastic	Creates anaerobic conditions or prevents rotting	4(3)						
Listed steps	Reason																	
1. Cutting the grass on a sunny day	Higher concentration of sugars (or carbohydrates)																	
2. Allowing the cut grass to wilt	Increases dry matter content or less effluent																	
3. Rolling or baling the cut grass	Creates anaerobic conditions (or eliminates oxygen)																	
4. Covering the grass in plastic	Creates anaerobic conditions or prevents rotting																	
(c)	<p>Simple on-site silage test:</p> <table border="1"> <thead> <tr> <th>Test</th> <th>Result and conclusion</th> </tr> </thead> <tbody> <tr> <td>Colour of silage</td> <td>Yellow-green indicates high quality or dark green (or brown) indicates poor quality</td> </tr> <tr> <td>Smell of silage</td> <td>Sharp (or acidic) smell indicates high quality or putrid smell indicates poor quality</td> </tr> <tr> <td>Squeeze silage (or dry matter or DM test)</td> <td>Small amount of liquid produced from silage indicates high quality or large amount of liquid produced indicates poor quality</td> </tr> <tr> <td>pH of silage</td> <td>pH < 5 indicates high quality or pH > 5 indicates poor quality</td> </tr> <tr> <td>Taste of silage</td> <td>Sharp (or acidic) taste indicates high quality or sweet or sour taste indicates poor quality</td> </tr> <tr> <td>Feel of silage</td> <td>A firm texture indicates high quality or a slimy feel indicates poor quality</td> </tr> <tr> <td></td> <td></td> </tr> </tbody> </table>	Test	Result and conclusion	Colour of silage	Yellow-green indicates high quality or dark green (or brown) indicates poor quality	Smell of silage	Sharp (or acidic) smell indicates high quality or putrid smell indicates poor quality	Squeeze silage (or dry matter or DM test)	Small amount of liquid produced from silage indicates high quality or large amount of liquid produced indicates poor quality	pH of silage	pH < 5 indicates high quality or pH > 5 indicates poor quality	Taste of silage	Sharp (or acidic) taste indicates high quality or sweet or sour taste indicates poor quality	Feel of silage	A firm texture indicates high quality or a slimy feel indicates poor quality			4 Test + 4 Result + 4 Conclusion
Test	Result and conclusion																	
Colour of silage	Yellow-green indicates high quality or dark green (or brown) indicates poor quality																	
Smell of silage	Sharp (or acidic) smell indicates high quality or putrid smell indicates poor quality																	
Squeeze silage (or dry matter or DM test)	Small amount of liquid produced from silage indicates high quality or large amount of liquid produced indicates poor quality																	
pH of silage	pH < 5 indicates high quality or pH > 5 indicates poor quality																	
Taste of silage	Sharp (or acidic) taste indicates high quality or sweet or sour taste indicates poor quality																	
Feel of silage	A firm texture indicates high quality or a slimy feel indicates poor quality																	

Q 9		
(a)	<p>(i) <i>Element in ground limestone:</i> Calcium [Accept symbol]</p> <p>(ii) <i>How a soil becomes acidic:</i> Crop removal/ leaching/(acid) rain/ animal urine/ addition of certain fertilisers/ plant vegetation (e.g. pine needles)/ addition of slurry or of farmyard manure Any two</p> <p>(iii) <i>Finding pH of a soil sample:</i> Add soil to beaker (or suitable container)/ add distilled water (or deionised water)/ stir soil and water/ filter mixture/ add universal indicator solution (or indicator paper) to filtrate/ compare colour with pH chart Any four or Add soil to beaker (or suitable container)/ add distilled water (or deionised water)/ stir soil and water/ pH meter/ insert electrode (of meter) into distilled water to check if meter reading accurately/ insert electrode into soil-water mixture/ read the pH Any four</p>	3 3 + 2 4(3)
(b)	<p>(i) <i>The three principal elements in 10-10-20:</i> Nitrogen Phosphorus Potassium [Allow symbols]</p> <p>(ii) <i>Function of one of the nutrient elements in 10-10-20:</i> <i>Nitrogen:</i> Formation of chlorophyll (or of green colour) or prevents chlorosis (or prevents yellowing) or protein formation or increases yield or promotes leafy growth or <i>Phosphorus:</i> Cell division or energy transfer in cells or seed germination or promotes root growth or enhances seed formation or <i>Potassium:</i> Protein formation or disease prevention or promotes healthy growth or promotes early ripening or enhances fruit quality</p>	3(4) 4

(c)	<p>(i) <i>How FYM and slurry stored:</i></p> <p><i>Farmyard manure:</i> In a dungstead or on concrete or on in the open</p> <p><i>Slurry:</i> In an underground slurry tank or in a (covered) over-ground slurry tank</p> <p>(ii) <i>Differences between composition of FYM and of slurry:</i></p> <table border="1" data-bbox="333 505 1203 999"> <thead> <tr> <th data-bbox="333 505 774 550">FYM</th><th data-bbox="774 505 1203 550">Slurry</th></tr> </thead> <tbody> <tr> <td data-bbox="333 550 774 595">Less water</td><td data-bbox="774 550 1203 595">or More water</td></tr> <tr> <td data-bbox="333 595 774 640">Contains straw</td><td data-bbox="774 595 1203 640">or No straw</td></tr> <tr> <td data-bbox="333 640 774 685">Less nitrogen</td><td data-bbox="774 640 1203 685">or More nitrogen</td></tr> <tr> <td data-bbox="333 685 774 729">More phosphorus</td><td data-bbox="774 685 1203 729">or Less phosphorus</td></tr> <tr> <td data-bbox="333 729 774 774">Solid</td><td data-bbox="774 729 1203 774">or Liquid</td></tr> <tr> <td data-bbox="333 774 774 819">Rich in organic matter</td><td data-bbox="774 774 1203 819">or Low in organic matter</td></tr> </tbody> </table> <p>(iii) <i>Precautions when agitating slurry:</i> Wear a mask/ do not work alone/ remove livestock from shed/ open shed doors/ agitate on windy day/ agitate from outside</p>	FYM	Slurry	Less water	or More water	Contains straw	or No straw	Less nitrogen	or More nitrogen	More phosphorus	or Less phosphorus	Solid	or Liquid	Rich in organic matter	or Low in organic matter	4 4 Any two 2(4) Any two 2(4)
FYM	Slurry															
Less water	or More water															
Contains straw	or No straw															
Less nitrogen	or More nitrogen															
More phosphorus	or Less phosphorus															
Solid	or Liquid															
Rich in organic matter	or Low in organic matter															

Q 10		
(a)	<p>(i) How many chromosomes in cattle gametes: 30</p> <p>(ii) Organ in which female games produced: Ovary</p> <p>(iii) Type of cell division that produces gametes: Meiosis</p>	4 4 4
(b)	<p>Cross 1:</p> <p>Gametes: (G) × (g)</p> <p>Offspring genotype: (Gg)</p> <p>Offspring phenotype: <u>Green</u></p>	2(4) 4 4
(c)	<p>Cross 2:</p> <p>Parents' genotypes: (Gg) × (Gg)</p> <p>Possible gametes: (G) (g) × (G) (g)</p> <p>Offspring genotypes: (GG) (Gg) (gg)</p> <p>Offspring phenotypes: <u>Green</u> <u>Albino</u></p>	2(3) 4(2) 3(2) 2(2)
(d)	<p>(i) Cross breeding: The mating of two different breeds of the same species or crossing two different varieties of plants</p> <p>(ii) An advantage of cross breeding: Hybrid vigour or increased prolificacy or increased milk yield or better quality milk or increased disease resistance or increased yields</p>	4 4

Q 11

(a)	<p>(i) <i>Dairy breeds:</i> Holstein (Friesian)/ Jersey/Ayrshire/ Montbeliarde/ Norwegian Red/ (British) Friesian/ Kerry [Allow Shorthorn]</p>	Any two 2(4)																		
	<p>(ii) <i>Why suitable for dairy:</i></p>																			
	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Breed</th> <th>Suitability</th> </tr> </thead> <tbody> <tr> <td>Holstein (Friesian)</td> <td>High milk yields</td> </tr> <tr> <td>Jersey</td> <td>High milk solids or low maintenance or easy calving</td> </tr> <tr> <td>Ayrshire</td> <td>High milk solids or easy calving or longevity</td> </tr> <tr> <td>Montbeliarde</td> <td>Milk suitable for cheese making or good fertility or longevity or good resistance to mastitis</td> </tr> <tr> <td>Norwegian Red</td> <td>Easy calving or high fertility or good (udder) health</td> </tr> <tr> <td>(British) Friesian</td> <td>Dual-purpose or high milk yields</td> </tr> <tr> <td>Shorthorn</td> <td>Dual-purpose or high milk yields</td> </tr> <tr> <td>Kerry</td> <td>Hardy or easy calving or docile</td> </tr> </tbody> </table>	Breed	Suitability	Holstein (Friesian)	High milk yields	Jersey	High milk solids or low maintenance or easy calving	Ayrshire	High milk solids or easy calving or longevity	Montbeliarde	Milk suitable for cheese making or good fertility or longevity or good resistance to mastitis	Norwegian Red	Easy calving or high fertility or good (udder) health	(British) Friesian	Dual-purpose or high milk yields	Shorthorn	Dual-purpose or high milk yields	Kerry	Hardy or easy calving or docile	Any one 4
Breed	Suitability																			
Holstein (Friesian)	High milk yields																			
Jersey	High milk solids or low maintenance or easy calving																			
Ayrshire	High milk solids or easy calving or longevity																			
Montbeliarde	Milk suitable for cheese making or good fertility or longevity or good resistance to mastitis																			
Norwegian Red	Easy calving or high fertility or good (udder) health																			
(British) Friesian	Dual-purpose or high milk yields																			
Shorthorn	Dual-purpose or high milk yields																			
Kerry	Hardy or easy calving or docile																			
	<p>(iii) <i>Why dairy cows culled:</i></p>																			
	Injury (or lameness or bad feet)/ low milk yield/ poor milk quality (or explained)/																			
	disease (or named disease)/ fertility problems/ calving difficulties/ bad temperament/																			
	grading up/ old age/ poor conformation/ poor BCS	Any two 2(4)																		
(b)	<p>(i) <i>Characteristics of replacement heifers:</i></p>																			
	Good conformation/ healthy udder or good teat placement/ good feet/ clean shiny																			
	coat/ disease-free or healthy (or one sign of good health explained)/ good BCS																			
	(or in good condition)/ bred from cow with high % milk solids/ good temperament/																			
	bred from a sire with a high EBI	Any two 2(4)																		
	<p>(ii) <i>Heifer age at first calving:</i></p>																			
	22 - 26 months	4																		
	<p>(iii) <i>Target weight at first calving:</i></p>																			
	500 – 550 kg	4																		
	<p>(iv) <i>Signs that indicate calving imminent:</i></p>																			
	Restlessness/ isolates herself/ swollen vulva/ mucus discharge from vulva/ swollen																			
	udder/ milk leaking from udder/ pelvic ligaments not visible (or pins drop)	Any two 2(4)																		

(c)	<p>(i) <i>Body condition scoring:</i> A measure of the fat reserves on an animal's body or the fat reserves measured on a scale of 1-5 for cattle or the fat reserves measured on a scale of 1-9 for pigs</p> <p>(ii) <i>How BCS assessed in cows:</i> Hand pressure applied to (specific areas of) backbone/to assess body fatness or thinness/scale of 1-5 in cattle/1 indicates overly thin/4 indicates overly fat Any two</p> <p>(iii) <i>Cause of low BCS in cows:</i> Poor feeding or disease or old age or injury or not steaming up</p> <p>(iv) <i>Target BCS at calving:</i> 3 – 3.5</p>	4 + 4(3)

Q 12

(a)	<p>(i) <i>Leaf adaptations for photosynthesis:</i> Large surface area (or broad)/ thin/ stomata/ large air spaces/ most chloroplasts towards top of leaf (or in palisade layer)/ good supply of veins (or of vascular tissue or of xylem or of phloem)</p> <p style="text-align: right;">Any two</p> <p>(ii) <i>Reasons for the given procedures:</i></p> <table border="1" data-bbox="182 426 1373 707"> <thead> <tr> <th data-bbox="182 426 786 471">Procedure</th><th data-bbox="786 426 1373 471">Reason</th></tr> </thead> <tbody> <tr> <td data-bbox="182 471 786 516"><i>Place leaf in boiling water</i></td><td data-bbox="786 471 1373 516">To kill the leaf or to destroy the enzymes</td></tr> <tr> <td data-bbox="182 516 786 595"><i>Boil the leaf in alcohol or methylated spirits</i></td><td data-bbox="786 516 1373 595">To remove the chlorophyll (or green colour)</td></tr> <tr> <td data-bbox="182 595 786 662"><i>Rinse the leaf in warm water</i></td><td data-bbox="786 595 1373 662">To remove the alcohol or to soften the leaf</td></tr> <tr> <td data-bbox="182 662 786 707"><i>Pour iodine solution on the leaf</i></td><td data-bbox="786 662 1373 707">To test the leaf for starch</td></tr> </tbody> </table> <p>(iii) <i>Positive colour? Blue-black</i></p>	Procedure	Reason	<i>Place leaf in boiling water</i>	To kill the leaf or to destroy the enzymes	<i>Boil the leaf in alcohol or methylated spirits</i>	To remove the chlorophyll (or green colour)	<i>Rinse the leaf in warm water</i>	To remove the alcohol or to soften the leaf	<i>Pour iodine solution on the leaf</i>	To test the leaf for starch	3(4) + 4(2)
Procedure	Reason											
<i>Place leaf in boiling water</i>	To kill the leaf or to destroy the enzymes											
<i>Boil the leaf in alcohol or methylated spirits</i>	To remove the chlorophyll (or green colour)											
<i>Rinse the leaf in warm water</i>	To remove the alcohol or to soften the leaf											
<i>Pour iodine solution on the leaf</i>	To test the leaf for starch											
<p>(i) <i>Excretion:</i> Removing waste products of metabolism from body or removing waste products from the blood</p> <p>(ii) <i>Parts:</i> A = Kidney B = Ureter C = Bladder</p> <p>(iii) <i>Substances removed from blood in kidney:</i> Water/ urea/ salt/ hormones/ water-soluble vitamins/ potassium ions</p> <p style="text-align: right;">Any two</p> <p>(iv) <i>Other organs of excretion:</i> Skin Lungs</p>	2(4) + 6(2)											
<p>(i) <i>Parts of flower:</i> A = Petal; B = Anther [<i>Allow stamen</i>]; C = Ovule; D = Stigma [<i>Allow carpel</i>]</p> <p>(ii) <i>Wind or insect pollinated:</i> Insect</p> <p><i>Reasons for choice:</i> Large petals/petals brightly coloured/ scented petals/small anthers/anthers inside petals (or flower)/ stigma inside petals (or flower)</p> <p style="text-align: right;">Any two</p> <p>(iii) <i>E develops into:</i> Fruit</p> <p>(iv) <i>C develops into:</i> Seed</p> <p>(v) <i>Conditions essential for germination:</i> Moisture (or water) and Oxygen (or air) and Suitable temperature (or warmth)</p>	2(4) + 2(2) + 8(1)											

Q 13		Any two of (a), (b), (c), (d) to be answered	(30, 30)																
(a)	<p>(i) <i>Factors affecting soil temperature:</i> Soil type/ water content/ colour/ humus or organic matter content/ aspect/ altitude/ drainage</p> <p style="text-align: right;">Any two</p> <p>(ii) <i>Loam soil:</i> A soil with roughly equal amounts of sand, silt and clay or a soil with 40% sand, 40% silt and 20% clay.</p> <p>(iii) <i>Advantages of loam:</i> Good drainage/ good aeration/ fertile/ warm/ early/ easy to till/ good water holding capacity</p> <p style="text-align: right;">Any two</p> <p>(iv) <i>How earthworms improve soil:</i> Improve drainage/ improve aeration/ decompose organic matter into humus or add humus/ improve soil fertility/ mix soil/ improve soil structure</p> <p style="text-align: right;">Any two</p> <p>(v) <i>Factor causing decrease in earthworm population:</i> Low pH or water-logging or drought or lack of oxygen or soil cultivation or predators or low organic matter content</p>		2(6) + 6(3)																
(b)	<p>(i) <i>Barley:</i></p> <table border="1"> <thead> <tr> <th></th> <th>Winter barley</th> <th>or</th> <th>Spring barley</th> </tr> </thead> <tbody> <tr> <td>1. <i>Time of sowing</i></td> <td>September - November</td> <td></td> <td>February - April</td> </tr> <tr> <td>2. <i>Time of harvesting</i></td> <td>July - August</td> <td></td> <td>August - October</td> </tr> <tr> <td>3. <i>Expected yield</i></td> <td>7–9 tonne/ha</td> <td></td> <td>5–8 tonne/ha</td> </tr> </tbody> </table> <p>(ii) <i>Disease:</i> Rhynchosporium (or leaf blotch) or powdery mildew or leaf rust or barley yellow dwarf virus or eyespot</p> <p>(iii) <i>Pest:</i> Wireworms or leatherjackets or aphids or birds or slugs</p> <p>(iv) <i>Safe winter grain storage:</i> Dry (or correct moisture content or 14-18% moisture content)/ treated with acid/ sealed/ correct temperature/ good hygiene/ free from vermin/ good ventilation</p>		Winter barley	or	Spring barley	1. <i>Time of sowing</i>	September - November		February - April	2. <i>Time of harvesting</i>	July - August		August - October	3. <i>Expected yield</i>	7–9 tonne/ha		5–8 tonne/ha		2(5) + 5(4)
	Winter barley	or	Spring barley																
1. <i>Time of sowing</i>	September - November		February - April																
2. <i>Time of harvesting</i>	July - August		August - October																
3. <i>Expected yield</i>	7–9 tonne/ha		5–8 tonne/ha																
			Any two																

(c)	<p><i>Management of lowland lambs:</i></p> <p>(i) <i>Care at birth:</i> Remove mucus/ dry lamb (or rub with straw) or make sure ewe licks lamb/ dip navel in iodine/ make sure lamb(s) suck or feed colostrum/ dry bed/ straw bedding/ good hygiene/ adequate supervision/ good shelter or lamb indoors/ remove to lambing pen/ encourage good bond between ewe and lamb(s) Any two</p> <p>(ii) <i>Changes in diet:</i> Colostrum/ ewe's milk/ meals (or concentrates or ration)/ hay/ silage/ grass Any two</p> <p>(iii) <i>Housing:</i> Dry/ straw bedding/ good ventilation/ draught free/ good hygiene (or clean)/ clean water supply/ individual lambing pens for first 2-3 days/ group pens for 2-3 days before turn-out Any two</p> <p>(iv) <i>Disease control:</i> Colostrum or good hygiene or vaccinate or adequate ventilation or antibiotics or isolate sick lamb(s) or steaming up of ewe(s) in late pregnancy or dosing</p> <p>(v) <i>Age at weaning:</i> 12 – 16 weeks</p>	2(6) + 6(3)										
(d)	<p>(i) <i>Functions of dietary protein:</i> Growth/ repair of damaged tissue/ enzyme production/ hormone production/ antibodies / development of muscle tissue or meat production/ hair or skin formation/ improved milk quality Any two</p> <p>(ii) <i>Protein test:</i> Food sample (or named food sample) in test-tube (or any suitable container)/ control/ add biuret solution (or add CuSO₄ and NaOH)/ shake to mix/ note colour change/ purple (or lilac or violet) colour indicates presence of protein/ no change (or blue colour) in control Any four [all these points may be obtained from labelled diagram]</p> <p>(iii) <i>Bulky feeds v concentrates:</i></p> <table border="1" data-bbox="195 1253 1354 1455"> <thead> <tr> <th data-bbox="195 1253 774 1298">Bulky feeds</th><th data-bbox="774 1253 1354 1298">Concentrates</th></tr> </thead> <tbody> <tr> <td data-bbox="195 1298 774 1343">High water content</td><td data-bbox="774 1298 1354 1343">or Low water content</td></tr> <tr> <td data-bbox="195 1343 774 1388">High fibre content</td><td data-bbox="774 1343 1354 1388">or Low fibre content</td></tr> <tr> <td data-bbox="195 1388 774 1432">Low in energy</td><td data-bbox="774 1388 1354 1432">or High in energy</td></tr> <tr> <td data-bbox="195 1432 774 1477">Low dry matter content</td><td data-bbox="774 1432 1354 1477">or High dry matter content</td></tr> </tbody> </table> <p style="text-align: right;">Any one</p> <p><i>An example of each:</i></p> <p>Bulky feeds: grass or silage or hay or haylage or root crops (or named root crop) or forage crop (or named forage crop)</p> <p>Concentrates: cereals (or named cereal) or molasses or beet pulp or soya bean meal</p> <p>(iv) <i>Maintenance ration:</i> The amount of feed needed by an animal to maintain a constant body weight or the amount of feed needed to keep an animal healthy</p> <p>(v) <i>Production ration:</i> The extra amount of feed needed by an animal to produce: 1 kg of LWG or 1 litre of milk or 1 kg wool or a calf or a lamb</p>	Bulky feeds	Concentrates	High water content	or Low water content	High fibre content	or Low fibre content	Low in energy	or High in energy	Low dry matter content	or High dry matter content	2(2) 4(3) 4 2 2 3 3
Bulky feeds	Concentrates											
High water content	or Low water content											
High fibre content	or Low fibre content											
Low in energy	or High in energy											
Low dry matter content	or High dry matter content
